(54) Title: ROLL-IN COT

(57) Abstract: A roll-in cot having a patient support attached to a wheeled transporter wherein the wheeled transporter comprises leading and trailing collapsible legs having respective proximal ends pivotally connected to a frame and distal ends including wheels wherein at least the leading or the trailing collapsible legs are operable from a locked condition by a release assembly wherein the release assembly comprises a safety and a leg release wherein one of said safety and said leg release comprises a linkage, wherein in an activated condition the linkage prevents the collapse of the collapsible legs, said linkage is connected to a touch bar disposed in front of said collapsible legs whereby engagement of the touch bar against a platform deactivates the linkage and enables the collapsible legs to be collapsed on release of the other of said safety and said leg release.
